

## 54LS160A/DM74LS160A, 54LS162A/DM74LS162A Synchronous Presettable BCD Decade Counters

### General Description

The 'LS160 and 'LS162 are high speed synchronous decade counters operating in the BCD (8421) sequence. They are synchronously presettable for application in programmable dividers and have two types of Count Enable inputs plus a Terminal Count output for versatility in forming synchronous multistage counters. The 'LS160 has an asynchronous Master Reset input that overrides all other inputs and forces the outputs LOW. The 'LS162 has a Synchronous Reset input that overrides counting and parallel loading and allows all outputs to be simultaneously reset on the rising edge of the clock.

### Features

- Synchronous counting and loading
- High speed synchronous expansion
- Typical count rate of 35 MHz
- Fully edge triggered

### Connection Diagram

TL/F/10177-1

\*MR for 'LS160  
\*SR for 'LS162

Order Number 54LS160ADMQB, 54LS160AFMQB, 54LS160ALMQB,  
54LS162ADMQB, 54LS162AFMQB, 54LS162ALMQB, DM74LS160AM,  
DM74LS160AN, DM74LS162AM or DM74LS162AN  
See NS Package Number E20A, J16A, M16A, N16E or W16A

Pin Names	Description
CEP	Count Enable Parallel Input
CET	Count Enable Trickle Input
CP	Clock Pulse Input (Active Rising Edge)
$\overline{MR}$ ('160)	Asynchronous Master Reset Input (Active LOW)
$\overline{SR}$ ('162)	Synchronous Reset Input (Active LOW)
P0-P3	Parallel Data Inputs
$\overline{PE}$	Parallel Enable Input (Active LOW)
Q0-Q3	Flip-Flop Outputs
TC	Terminal Count Output

### Logic Symbol

TL/F/10177-2

$V_{CC}$  = Pin 16 \*MR for 'LS160  
GND = Pin 8 \*SR for 'LS162

### Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	7V
Operating Free Air Temperature Range	
54LS	-55°C to +125°C
DM74LS	0°C to +70°C
Storage Temperature Range	-65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

### Recommended Operating Conditions

Symbol	Parameter	54LS160A/162A			DM74LS160A/162A			Units
		Min	Nom	Max	Min	Nom	Max	
V <sub>CC</sub>	Supply Voltage	4.5	5	5.5	4.75	5	5.25	V
V <sub>IH</sub>	High Level Input Voltage	2			2			V

$t_{PHL}$	Propagation Delay $\overline{MR}$ to $Q_n$ ('160)		28	ns

## Functional Description

The 'LS160 and 'LS162 count modulo-10 in the BCD (8421) sequence. From state 9 (HLLH) they increment to state 0 (LLLL). The '161 and '163 count modulo-16 binary sequence. From state 15 (HHHH) they increment to state 0 (LLLL). The clock inputs of all flip-flops are driven in parallel through a clock buffer. Thus all changes of the Q outputs (except due to Master Reset of the 'LS160) occur as a result of, and synchronous with, the LOW-to-HIGH transition of the CP input signal. The circuits have four fundamental modes of operation, in order of precedence: asynchronous reset ('LS160), synchronous reset ('LS162), parallel load, count-up and hold. Five control inputs—Master Reset ( $\overline{MR}$ , 'LS160), Synchronous Reset ( $\overline{SR}$ , 'LS162), Parallel Enable ( $\overline{PE}$ ), Count Enable Parallel (CEP) and Count Enable Trickle (CET)—determine the mode of operation, as shown in the

Mode Select Table. A LOW signal on  $\overline{MR}$  overrides all other inputs and asynchronously forces all outputs LOW. A LOW signal on  $\overline{SR}$  overrides counting and parallel loading and allows all outputs to go LOW on the next rising edge of CP. A LOW signal on  $\overline{PE}$  overrides counting and allows information on the Parallel Data ( $P_n$ ) inputs to be loaded into the flip-flops on the next rising edge of CP. With  $\overline{PE}$  and  $\overline{MR}$  ('LS160) or  $\overline{SR}$  ('LS162) HIGH, CEP and CET permit counting when both are HIGH. Conversely, a LOW signal on either CEP or CET inhibits counting.

The 'LS160A and 'LS162A use D-type edge-triggered flip-flops and changing the  $\overline{SR}$ ,  $\overline{PE}$ , CEP and CET inputs when the CP is in either state does not cause errors, provided that the recommended setup and hold times, with respect to the rising edge of CP, are observed.

## Functional Description (Continued)

The Terminal Count (TC) output is HIGH when CET is HIGH and the counter is in its maximum count state (9 for the decade counters, 15 for the binary counters). To implement synchronous multistage counters, the TC outputs can be used with the CEP and CET inputs in two different ways. These two schemes are shown in the 9310 data sheet. The TC output is subject to decoding spikes due to internal race conditions and is therefore not recommended for use as a clock or asynchronous reset for flip-flops, counters or registers. In the decade counters of the 'LS160, 'LS162, the TC output is fully decoded and can only be HIGH in state 9.

LOGIC EQUATIONS:

Count Enable =  $CEP \cdot CET \cdot PE$

TC =  $Q_0 \cdot \bar{Q}_1 \cdot \bar{Q}_2 \cdot Q_3 \cdot CET$

Mode Select Table

* $\bar{SR}$	$\bar{PE}$	CET	CEP	Action on the Rising Clock Edge (↗)
L	X	X	X	RESET (Clear)
H	L	X	X	LOAD ( $P_n \rightarrow Q_n$ )
H	H	H	H	COUNT (Increment)
H	H	L	X	NO CHANGE (Hold)
H	H	X	L	NO CHANGE (Hold)

\*For the 'LS162  
H = HIGH Voltage Level  
L = LOW Voltage Level  
X = Immaterial

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
