

93425/93L425 1024 x 1-Bit Static Random Access Memory

Memory and High Speed Logic

Description

The 93425 is a 1024-bit read/write Random Access Memory (RAM), organized 1024 words by one bit. It is designed for high speed cache, control and buffer storage applications. The device includes full on-chip decoding, separate Data input and non-inverting Data output, as well as an active LOW Chip Select line.

- **Commercial Address Access Time**
93425 — 20 to 60 ns Max
- **Military Address Access Time**
93425 — 30 to 70 ns Max
- **Low Power Version Also Available (93L425)**
- **Features Three State Output**
- **Power Dissipation Decreases with Increasing Temperature**

Pin Names

CS	Chip Select (Active LOW)
A ₀ -A ₉	Address Inputs
WE	Write Enable (Active LOW)
D	Data Input
O	Data Output

Logic Symbol

V_{CC} = Pin 16
GND = Pin 8

Connection Diagram

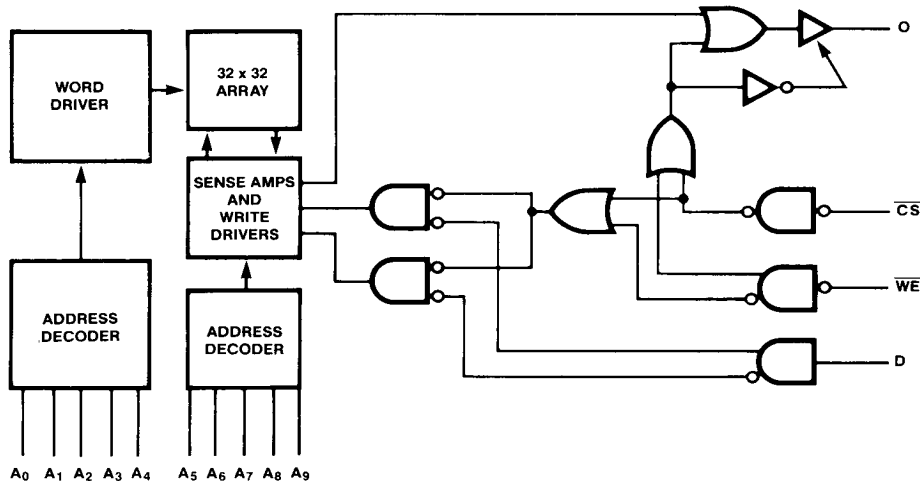

16-Pin DIP (Top View)

Note:

The 16 pin Flatpak version has the same pinout connections as the Dual In-line package.

Logic Diagram

Functional Description

The 93425 is a fully decoded 1024-bit read/write Random Access Memory organized 1024 words by one bit. Bit selection is achieved by means of a 10-bit address, A₀ through A₉.

One Chip Select input is provided for easy memory array expansion of up to 2048 bits without the need for external decoding. For larger memories, the fast chip select access time permits direct address decoding without an increase in overall memory access time.

The read and write functions of the 93425 are controlled by the state of the active LOW Write Enable (\overline{WE}) input. When \overline{WE} is held LOW and the chip is selected, the data at D is written into the location specified by the binary address present at A₀ through A₉. Since the write function is level triggered, data must be held stable at the data input for at least $t_{WSD(min)}$ plus $t_{W(min)}$ plus $t_{WHD(min)}$ to insure a valid write. When \overline{WE} is held HIGH and the chip selected, data is read from the addressed location and presented at the output (O).

The 93425 has a three-state output which provides an active pull-up or pull-down when enabled and a high impedance (HIGH Z) state when disabled. The active pull-up provides drive capability for high capacitive loads while the high impedance state allows optimization of word expansion in bus organized systems.

Truth Table

Inputs			Output	Mode
\overline{CS}	\overline{WE}	D	O	
H	X	X	HIGH Z	Not Selected
L	L	L	HIGH Z	Write "0"
L	L	H	HIGH Z	Write "1"
L	H	X	D _{OUT}	Read

H = HIGH Voltage Level (2.4 V)
 L = LOW Voltage Level (.5 V)
 X = Don't Care (HIGH or LOW)

DC Performance Characteristics: Over operating temperature ranges (Note 1)

Symbol	Characteristic	Min	Typ	Max	Unit	Condition
V _{OL}	Output LOW Voltage		0.3	0.45	V	V _{CC} = Min, I _{OL} = 16 mA
V _{IH}	Input HIGH Voltage	2.1	1.6		V	Guaranteed Input HIGH Voltage for All Inputs ⁵
V _{IL}	Input LOW Voltage		1.5	0.8	V	Guaranteed Input LOW Voltage for All Inputs ⁵
V _{OH}	Output HIGH Voltage	2.4			V	V _{CC} = Min, I _{OH} = -5.2 mA
I _{IL}	Input LOW Current		-250	-400 ⁷	μA	V _{CC} = Max, V _{IN} = 0.4 V
I _{IH}	Input HIGH Current		1.0	40	μA	V _{CC} = Max, V _{IN} = 4.5 V
I _{IHB}	Input Breakdown Current			1.0	mA	V _{CC} = Max, V _{IN} = V _{CC}
V _{IC}	Input Diode Clamp Voltage		-1.0	-1.5	V	V _{CC} = Max, I _{IN} = -10 mA
I _{OZH} I _{OZL}	Output Current (HIGH Z)			50 -50	μA	V _{CC} = Max, V _{OUT} = 2.4 V V _{CC} = Max, V _{OUT} = 0.5 V
I _{OS}	Output Current Short Circuit to Ground			-100	mA	V _{CC} = Max, Note 3
I _{CC}	Power Supply Current			65 75 125 135 155 170	mA mA mA mA mA mA	93L425-35, 93L425-45, 93L425-60 (commercial) 93L425-40, 93L425-50, 93L425-70 (military) 93425-25, 93425-30 (commercial) 93425-30, 93425-40 (military) 93425A, 93425-45 (commercial) 93425-60 (military) V _{CC} = Max, Note 6

Notes

- Typical values are at V_{CC} = 5.0 V, T_C = +25°C and maximum loading.
- The maximum address access time is guaranteed to be the worst case bit in the memory using a pseudorandom testing pattern.
- Short circuit to ground not to exceed one second.
- t_W measured at t_{WSA} = Min, t_{WSA} measured at t_W = Min.
- Static condition only.
- All inputs GND
Output open
- I_{IL} = -300 μA for 93L425

Commercial

Notes

1. Timing Diagram represents one solution which results in an optimum cycle time. Timing may be changed to fit various applications as long as the worst case limits are not violated.
2. Input voltage levels for worst case AC test are 3.0/0.0 V.
